

DOZUKI

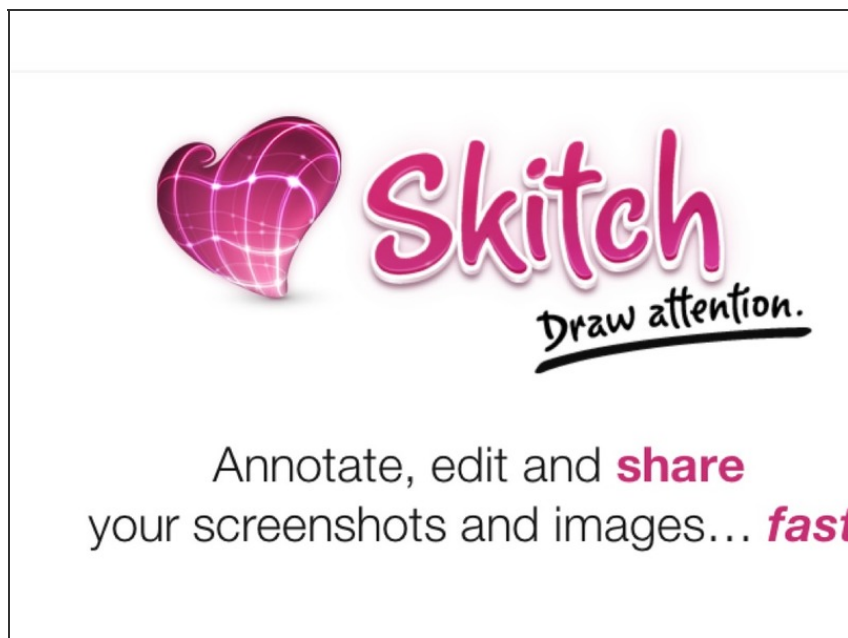

Making Images from Word Art

Written By: Collin MacGregor

SUMMARY

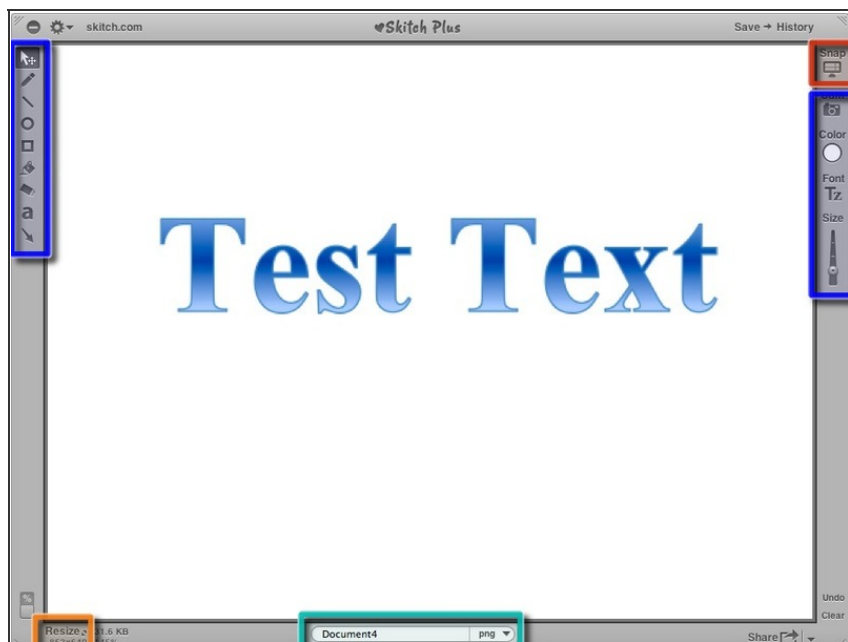

1. Test the guide
2. The guide should be this long
3. How can we make more guides
4. If the guides are this long they will be horrible

Step 1 — Making Images from Word Art

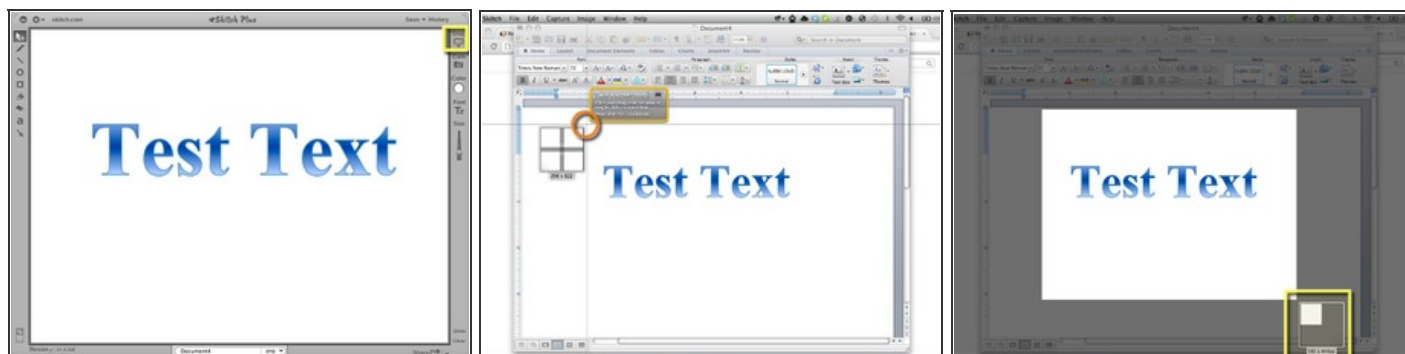

- Download Skitch:
<http://skitch.com/>
- Skitch is a Mac Application that allows you to take screenshots and save them as images to later upload to other places.
- It is a free application.
- After you have installed Skitch, open up your word processing software program (Pages/MS Word).

Step 2 — Skitch Description

- Click this button when you are ready to take a screenshot using Skitch.
- This will tell you the current pixel resolution of your image, you can resize the image here as well.
- Here is where you can download the image to your computer and give it a file name. You can also drag the image into Dozuki's image uploader just below this bar where it says **Drag Me**.
- Various editing tools that might be useful (I haven't used them too much when using Skitch).

Step 3

- Inside your word processing program, create the Word Art or Font you are interested in.
 - The image size you need to upload images to [Category Pages](#) is **592x444 Pixels**
- Click on the **Snap** button in Sketch.
 - The window will disappear.
- Click on the Word Document Area
- Then drag the rectangle over until you have reached **at least** the minimum pixel requirement.
 - You can drag greater than this amount as well.

Step 4

- Insert wisdom here.
